					Griebenow	97	127	0.1	r+th >enalap
<b>1985 to</b>	<b>2003</b>	<b>116703</b>	<b>4.3y</b>	<b>th=&gt; all</b>	<b>1977 to</b>	<b>1997</b>	<b>7459</b>	<b>1-3y</b>	<b>r=&gt;all other</b>

\*MAPPHY used 47mg/d HCT vs 170mg/d metoprolol ie gross excess HCT dose compared to the needed 6-12.5mg/day, and compared to the tolerated dose of metoprolol. (UKPDS is shown purely because it is the longest antiHBP trial ever, and the gold standard of all RCTs, in type 2 diabetics).
